Professional Summary

Full-Stack Software Engineer with **3+ years of experience** owning features end-to-end across two in-house **multi-tenant SaaS** platforms (Tickato, Friday) serving **7+ production tenants** combined. Hands-on with tenant-isolated architecture, shared notification/email infrastructure reused across multiple internal apps, and real-time systems (WebSockets). Built a custom server-side search/filter/pagination engine that removed a paid third-party dependency. Works within **5-engineer product teams** in **Agile/Scrum** environments, covering database design, API architecture (**REST/GraphQL, OAuth, Swagger/OpenAPI**), and deployment.

Skills

Frontend: React.js, Next.js, TypeScript, Redux Toolkit, Tailwind CSS, Shaden/UI, AG Grid

Backend: Node.js, NestJS, Express.js, GraphQL, REST APIs, WebSockets (Socket.io), TypeORM

Databases: PostgreSQL, MongoDB, MySQL

Auth & Security: JWT, NextAuth, Role-Based Access Control (RBAC), OAuth

Architecture: Multi-Tenant SaaS, Microservices, Real-Time Systems, Server-Side Rendering, API Design

Testing: Jest, Supertest, Unit & Integration Testing

Tools & Workflow: Git, GitHub, Jira, Azure, Agile/Scrum, Swagger/OpenAPI

Experience

Software Engineer

Techverx

Lahore, PK
Jan 2026 – Present

- **Friday – In-House Multi-Tenant SaaS Platform for Food & Retail Chains (5-engineer team):** Full-stack owner of the admin/tenant-onboarding console and the **POS** (React + Electron) for in-store order handling. Designed and built a shared email-template and notification system consumed by both the admin console and the tenant-facing back-office app – one reusable module instead of duplicated logic per app. Also contributing to the **HQ-App** (Next.js, Page Router) for store/menu/product/terminal management. Currently supporting **5 pilot tenants**, architected to onboard additional franchise-style clients.
- **Friday v2 Re-Architecture:** Identified performance, functional, and scalability gaps in v1 – particularly its ability to adapt to each new tenant's requirements – and am leading the v2 redesign to rebuild the platform for multi-tenant scale and configurability.
- **Tickato – Multi-Tenant SaaS Ticketing (5-engineer team):** Full-stack contributor owning the admin console for tenant/multi-tenancy configuration and the white-label email-template system; designed tenant-isolated PostgreSQL databases, per-tenant Azure storage configs, and OAuth-secured, Swagger/OpenAPI-documented APIs. Live with **2 production tenants**, architected to onboard more.
- Also shipped: a cross-platform Electron trading simulation letting instructors run real-market training workflows risk-free, and a CSV-based bulk staff-onboarding tool that replaced a slow

manual entry process for stadium/event personnel and media teams.

Associate Software Engineer

Lahore, PK

Techverx

May 2025 – Dec 2025

- **AG Grid Custom Plugin:** Built a server-side search, filter, pagination, and sorting engine to handle large datasets efficiently instead of upgrading to an AG Grid Enterprise license – then added pivoting, aggregation, and export on top of it.
- **Nutricare Platform:** Delivered a client management system for **100+ nutritionists**, including a reusable component library and NextAuth-based authentication, on a NestJS backend.
- **Vanir Volcano Construction Platform:** Sole full-stack developer – owned the product end-to-end, including development, client communication, demos, and QA guidelines; built real-time WebSocket features for live project tracking across teams.

Associate MERN Stack Developer

Lahore, PK

PieCyfer

Jun 2024 – May 2025

- **Racepark:** Built a real-time racing statistics portal on **WebSockets and MongoDB**, handling live leaderboard updates and third-party API integration.
- **CSV Management:** Architected a **GraphQL**-driven data transformation and visualization platform for dynamic dataset handling and client reporting.
- Also delivered: SEO-optimized **Next.js/NestJS** interfaces (Rise), a **Node.js/Express/MySQL** scheduling backend with automated email/SMS notifications (MMA Healthcare), and a reusable **TypeScript** component library with **Redux Toolkit** state management (Athleads).

MERN Stack Developer Intern

Lahore, PK

PieCyfer

Mar 2024 – May 2024

- Ranked **top 3 of 5 interns**; contributed to production projects within the first weeks.
- Built a full-stack **blog platform** (capstone) with JWT authentication, role-based access control (RBAC), and Swagger/OpenAPI documentation; wrote unit and integration tests with **Jest and Supertest**.

Education

BS in Software Engineering

2018 – 2022

Lahore Garrison University

CGPA: 3.35 / 4.0

Certifications

MERN Stack Developer Certification

Mar – May 2023

Excellence Delivered (ExD) Pvt Ltd
